

Hitotsubashi University
Department of Economics
Labor Economics I
Fall 2017

Instructor: Hiroaki Mori

Lecture Time: M,Th 8:45-10:30 AM

Course Website: <https://manaba.hit-u.ac.jp>

Email: hse.econ.mori@gmail.com

Office Hours: M 13:00-15:00

Office: Faculty Building 2, Room 211

Course Description

The objective of the course is to provide students with basic economic tools needed to understand and analyze the origins and extent of income inequality among individuals. As the first section of the labor economics sequence, this course mainly focuses on workers' labor supply behavior, lifecycle skill formation, and the pricing of skills in the labor market. Throughout this course, we will discuss the roles of economic theory and econometric methods in evaluating and designing various government policies that may alleviate inequality among individuals, such as income taxation, social insurance programs, education policies, and location-based development programs.

Lecture Style

This course consists of 12 lectures, 2 assignments, and a final exam. Lectures will be given in English.

Prerequisites

The prerequisites for this course are introductory microeconomics and introductory econometrics.

You are responsible for ensuring that you have successfully completed all course prerequisites. Lack of prerequisites may not be used as a basis for appeal. If you are found to be ineligible for a course, you may be removed from it at any time and you will receive no adjustment to your fees.

If you find that you do not have the course prerequisites, it is in your best interest to drop the course well before the end of the add/drop period. Your prompt attention to this matter will not only help protect your academic record, but will ensure that spaces become available for students who require the course for graduation.

Registration

You are responsible for ensuring that you are registered in the correct courses. If you are not registered in this course, the Department will not release your marks until your registration is corrected. If you notice a problem, please contact the administration office right away.

Assessment

The course grade will be based on 2 assignments and a final exam. The distribution of the marks is as follows:

Assessment	Weight
Assignments (2)	60%
Final exam	40%

Assignments: Two assignments will be posted to the course website. Typically, students will be given two weeks to complete each assignment. Students are permitted to work in a group of up to two students and to submit a single copy of their solutions per group. Assignments are due at the start of the day's lecture. The deadline for each assignment is listed below:

Assignment 1	10/16
Assignment 2	10/30

Exams: All exams are closed book. All electronic devices, except for a non-programmable calculator, will be prohibited during exams. Final exam date will be TBA.

Policy Regarding Late/Missed Assignments: Late assignments will be assessed a 10% penalty the first day, and not accepted subsequently. If a student fails to submit an assignment on time, and has a valid reason, it is their responsibility to contact the instructor and explain the reason. Proof supporting this reason may be requested by the instructor.

Textbook

[1] Borjas, George J., *Labor Economics*, 6th Edition, 2013. [Text]

It is required that students have access to the textbook. The 7th edition, published in 2015, also works as a textbook. A copy of the textbook will be available in the library once the term begins. Please note that my lectures will not strictly follow the textbook: they will be mostly based on the references listed at the end of the syllabus.

Schedule

Please note that the following is a tentative schedule for the course. All changes in the schedule will be announced in advance. Students are responsible for learning about these changes.

Lecture (Date)	Topic
01 (09/21)	Introduction
02 (09/25)	Polarization and income inequality
03 (09/28)	Lifecycle skill formation
04 (10/02)	Labor supply and optimal income taxation
05 (10/05)	Econometrics part 1: OLS estimation
06 (10/09)	Econometrics part 2: Difference-in-differences
07 (10/12)	Family policies and gender gaps
08 (10/16)	Competitive labor market equilibrium
09 (10/19)	Taste-based wage differentials
10 (10/23)	Equilibrium job search models
11 (10/26)	Optimal unemployment insurance
12 (10/30)	Local labor markets
13 (11/02)	Review for final
— (11/06)	Final exam

Topics

1. Introduction

- Trends in income inequality in the U.S. and Japan
- Family background and skill gaps among children

2. Polarization and income inequality

- Job polarization and jobless recoveries in the U.S.
- Supply of college graduates in the U.S. and Japan
- CES production function
- Canonical model of college wage premium

3. Lifecycle skill formation

- Sensitive periods and dynamic complementarity of skill formation
- Non-cognitive skills
- Evidence against the ability correlation hypothesis
- Early childhood interventions: Perry preschool program and Abecedarian project

4. Labor supply and optimal income taxation

- Income effect and substitution effect
- Reservation wages
- Laffer curve
- Welfare vs. workfare

- Earned income tax credit
5. OLS estimation
 - OLS estimators
 - t -test
 - Endogeneity problems
 6. Difference-in-differences
 - Treatment group and control group
 - Testing the common trend assumption
 7. Family policies and gender gaps
 - Gender employment gaps
 - Influences of population aging
 - Parental leave policies and childcare policies
 - Gender wage gaps
 - Selection bias
 - Gender gaps in college education
 - Gender gaps in skill usages
 8. Competitive labor market equilibrium
 - Efficiency of a competitive equilibrium
 - Incidence analysis
 - Estimating demand and supply with exclusion restrictions
 9. Taste-based wage differentials
 - Compensating differentials
 - Hedonic wage regression
 - Value of a statistical life (VSL)
 - Becker's model of taste-based discrimination
 - Testing the Becker's model
 - Limitations of audit studies
 10. Equilibrium job search models
 - Unemployment rate
 - Search frictions and search externalities
 - The DMP model

- Beveridge curve
- UI benefit cut and labor market outcomes

11. Optimal unemployment insurance

- Consumption smoothing benefit (cash-on-hand effect)
- Moral hazard effects (substitution effects)
- Estimation of cash-on-hand effect using severance pay
- Spike of unemployment exits around the time of benefit exhaustion
- Age-dependent UI design

12. Local labor markets

- Persistence of geographical inequality
- Equalizing forces of worker mobility
- Agglomeration hypothesis
- Location-based policies
